

Bronte Technology Audit

Technology moves at pace. While many businesses understand the need to implement a new and improved IT foundation on which to take the organisation forward, navigating the minefield of potential IT suppliers can be a hazardous task.

What is the first step? What is the most effective approach? How much should I invest?

Your business is unique. The people it's comprised of, the goals you've set, the clients you work with and the services you provide. Every unique business requires a unique IT infrastructure on which to drive itself forward. That's why Bronte consultants make it their business to know yours inside out.

When you work with Bronte the first thing we'll do is spend time talking to you about what you want to achieve. About where you'd like to take your business and when you'd like to do so. About the clients you work with and the services you provide. Then we'll watch your business in action.

This helps us draft the Bronte Technology Audit, created to be a valuable management tool. This is a comprehensive, jargon-free technology audit in which we'll suggest the technology, systems and practices that will ensure your business is future proof. And while Bronte prides itself on delivering the highest standards you'll find in the industry, you are free to choose an alternative supplier to deliver the recommendations we provide in a Bronte audit, should you wish.

Bronte Technology Audits identify a business organisation's IT strengths and weaknesses. We won't suggest expensive new technology for the sake of it. Instead we'll propose hardworking solutions that impact on the bottom line. Secure solutions designed to work as a finely tuned engine at the heart of your business.

Bronte is a Technology Means Business accredited organisation and is recognised by Business Link.

The Bronte Technology Audit includes;

A detailed analysis of your current IT infrastructure including;
